DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 09-27-2005 and 12-14-2009, the information disclosure statement has been considered by the examiner.

Allowable Subject Matter

3. Claims 22-42 are allowed.

Reasons for allowance

4. The following is an examiner's statement of reasons for allowance:

Regarding independent claims 22, 33, 37 and 42, the reference of Johansson (U.S. Pub. No. 2004/0170179) disclose In the UTRAN, Radio Link Control (RLC) buffer memory is located at the RNC to transiently store downlink data to be transmitted to the UE via the radio interface. The RNC is directly connected to the CN via the lu interface and represents a central node that is remote from the radio interface between the UE and a Node B, which allocates transport resources of a particular base station to the UE (page 1, par [0018]). For buffering downlink data packets RNC 16 further comprises a number of radio link control (RLC) buffer memory blocks, four of which are shown at positions 26 to 32 (page 5, par [0070]). And the

Art Unit: 2618

reference of Forssell (U.S. Patent No. 7,447,181) disclose a method and an apparatus for organizing PDUs into a transmit queue. In this embodiment the method includes passing a PDU to a Radio Link Control (RLC) unit, the PDU having a flag for indicating a priority of the PDU relative to other PDUs; storing the PDU into the transmit queue in accordance with the indicated priority; and transmitting the stored PDU to a radio channel before any stored PDUs having a lower priority. For the case where the RLC unit is associated with the mobile station, the PDU is a cell change PDU and the cell change PDU is assigned a highest priority (col. 5, lines 1-10).

The above prior art of record, however, fail to disclose or render obvious A telecommunications device and method of the operating comprising: a transceiver which enables the device to communicate over an air interface; a radio link control (RLC) entity which forms uplink RLC protocol data units (PDUs) for transmission over the air interface and which receives downlink RLC protocol data units (PDUs) over the air interface; a radio link control (RLC) buffer memory configured to include a transmitter buffer for storing the uplink RLC protocol data units (PDUs) and a receiver buffer for storing the downlink RLC protocol data units (PDUs); and characterized by: RLC reconfiguration logic means which is arranged to reconfigure at least one of a size of a transmitter buffer window and a size of a receiver buffer window by implementing a strategy for handling at least one of (a) downlink RLC protocol data units (PDUs) which are outside a new receiver buffer window; and (2) uplink RLC protocol data units (PDUs) which are either outside a new transmitter window or whose receipt by the radio access network has not been positively acknowledged; And (A) retaining all downlink RLC protocol data units (PDUs) upon reconfiguration; and, (B) retaining all uplink RLC protocol data units (PDUs) upon reconfiguration and its functions as specified in the claim.

Art Unit: 2618

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
